Profilele PVC comercializate de BALKAN RO sunt profile pentacamere, fabricate de firma WYMAR N.V. INTERNATIONAL S.A. BELGIA conform standardelor de calitate in vigoare. Profilele sunt extrudate din PVC rigid, ignifugat, stabilizat la UV, cu fete plane si marcate la fabricație, protejate cu banda autoadeziva.

Profilele principale au o adancime de 60mm, etanșarea se realizează cu garnituri PCE inserate direct in canalul de garnitura in timpul procesului de extrudare. Garnitura se poate suda la aceeasi temperatura cu profilul si este bifunctionala, rezistenta la conditiile de mediu si la procesul de imbatranire. Totodata profilele WYMAR S2500 se încadrează in clasa A3 de permeabilitate la aer, respectiv E4 la etanseitatea la apa conform SR EN 12208;2002.

Izolatia termica, hidrofuga, si economia de energie este conforma cu prevederile din normativ C107/319-97, având un coeficient de transfer termic de 1,26-1,35W/mpK. Izolația acustica este foarte buna, anjurand la Ia >= 38dB. Siguranța la foc este caracterizata prin clasa de combustibilitate C2; dificil inflamabil conform STAS11357/90.

*NOTA: Pentru evitarea supraîncalzirii aerului din incaperile situate pe est sau vest pe durata verii sau a pierderilor de energie în perioada sezonului rece va recomandam:

- folosirea unui geam termoizolant cu LOW E+ARGON
- folosirea unui profil cu un coeficient de transfer termic cât mai mic $k=1.2W/mp$
- pentru plasele de insecte latimea minima taxabila este de 850mm

ANTENTIE: la o cercevea cu latime mai mare de 850mm scade rezistenta acesteia si creste posibilitatea decalarii sticlei in timp direct proportional cu cresterea latimii
